

29.02.2009–WLM industry features

February 29th, the team of “WLM Acoustics“ was for a short visit at 6moons.com–Srajan Ebaen–to read here:

<http://www.6moons.com/industryfeatures/wlmacoustics/wlm.html>

There you will also get a first glimpse at a new prototype loudspeaker from WLM to be ranged in the Basic Series–it precedes with big steps!

WLM will be big with news in the near future–premiere of the new WLM Acoustics tube line shall be at the HighEnd show in Munich. The whole line of tube electronics will be developed and manufactured in close collaboration with Sasa Cokic from Trafomatic, a company specialized in manufacturing mains transformers, input- and output transformers, not to mention their expert knowledge of tube electronics. This enables to test and improve mains transformers and input-/output transformers on the fly without any compromises to achieve the best possible results by means of music reproduction–you will be amazed.

New models to come beside the SONATA integrated amp with EL34 tubes:

- LINEA - preamplifier with 2x 6N1P-EV incl. remote control
- GAMMA–DAC with tube output stage
- PHONATA–phono-preamp either as MM-only version, MM-/MC-version or MM-/MC-version with Lundahl step-up transformers
- SONATA–EL34 tube amp with input transformers
- ALLEGRA–EL34 (6x) mono amp with switchable triode-/ultralinear configuration
- MINUETTA–EL84 (x4) integrated amp with switchable triode-/ultralinear configuration

First impressions:
